These instructions assume you are familiar with programming the S3 using BlocklyProp. If not, follow the instructions on the Parallax.com webpage for preparing the S3 for programming.

The file S3_RROSS_vers1 is the RROSS program that must installed on the S3. It should also be available from Parallax in their Community Programs for the S3.

To use the program provided here, create a new private S3 program and leave it blank. When viewing the code, click the 3-bar drop drop-down menu at the top right of the screen. Choose UPLOAD BLOCKS FILE and select S3_RROSS_vers1 from its location on your system. Choose to REPLACE the existing file. Save the new program and download it to your S3.
